ShiftSure

Fair Workforce Reallocation During Automation and Disruption

When automation reduces the work,
what happens to the people who were doing it?

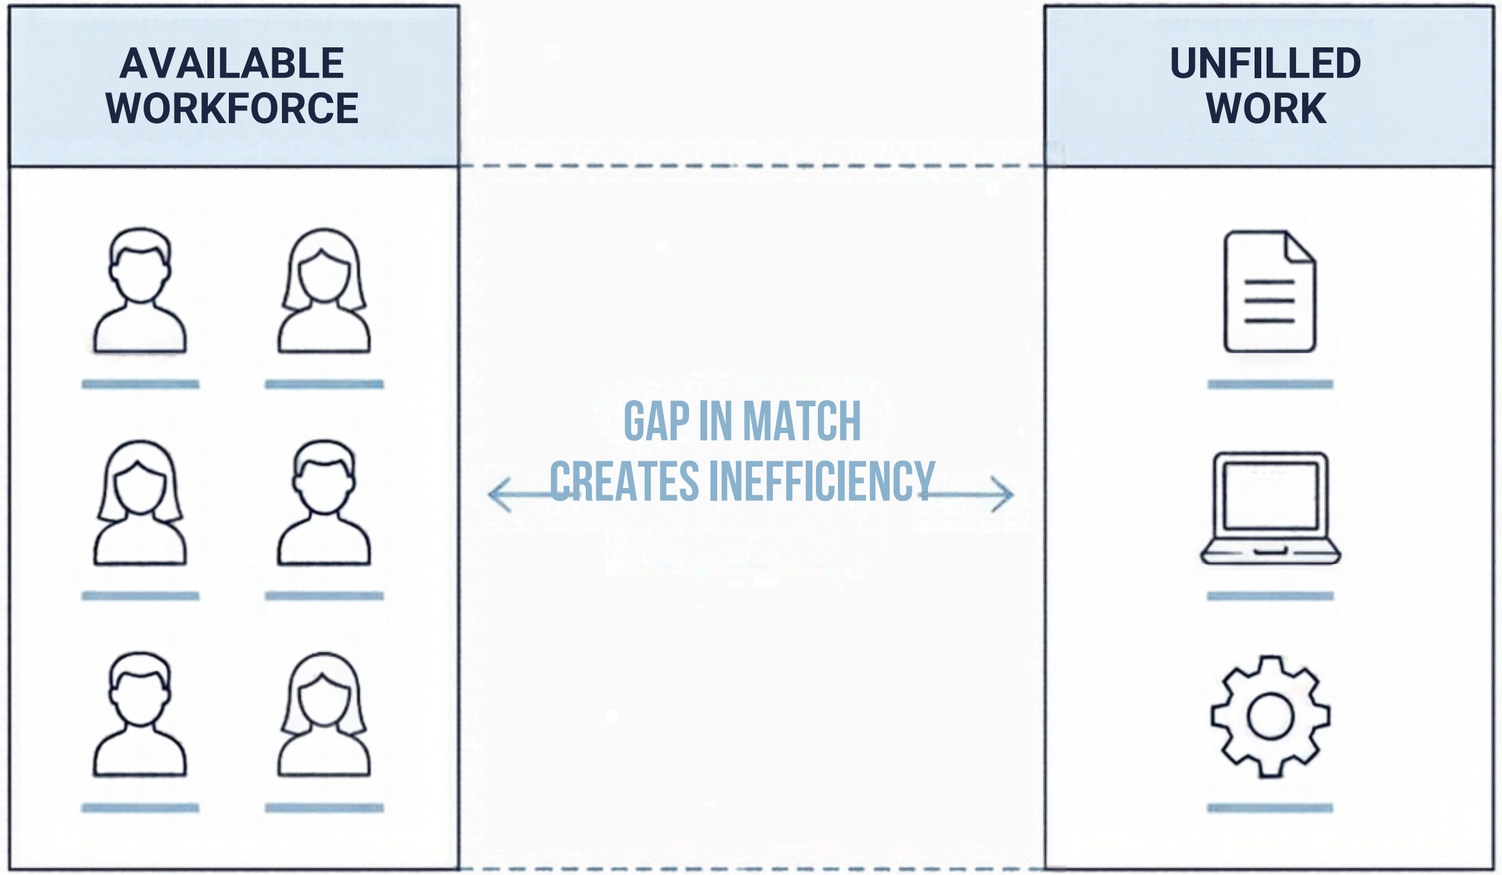

Work changes.
Workforce planning must change with it.

Workers may have idle capacity in one area while other teams have unfilled tasks

Internal skills and retraining opportunities can be overlooked

Redeployment decisions may distribute idle hours, overtime loss and training opportunities unevenly

From disruption to a better workforce plan.

1

DETECT

Identify disruption and calculate idle capacity

2

MATCH

Compare worker skills, certifications, shifts, location and availability with open tasks

3

OPTIMIZE

Generate alternative workforce allocation plans

4

COMPARE

Evaluate task coverage, idle hours, training costs and fairness

5

APPROVE

Let a manager review, approve or reject the recommendation

Efficiency, with people in the equation.

SAFETY FIRST

Certification and shift constraints cannot be violated.

FAIRNESS VISIBILITY

Identify differences in idle hours and access to training.

EXPLAINABLE DECISIONS

Show why a worker-task match is recommended.

HUMAN CONTROL

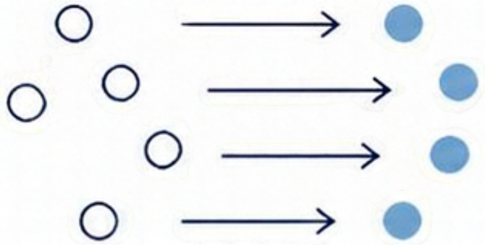

Managers make the final decision; workers can request corrections to skill records.

React + TypeScript → **Python / FastAPI** → **Optimization Solver** → **Workforce Plan + Metrics**

A better plan should be measurable.

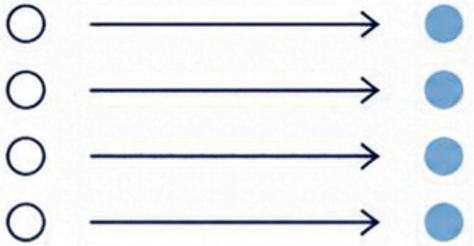

SUPERVISOR-STYLE BASELINE

Decisions rely on experience and local judgment.

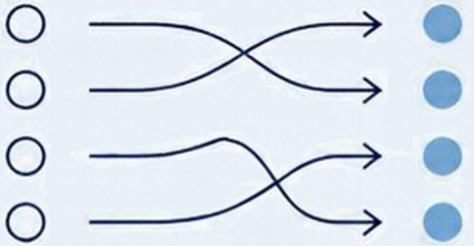

EFFICIENCY-FOCUSED OPTIMIZATION

Focuses on throughput and cost, without fairness constraints.

FAIRNESS-BALANCED OPTIMIZATION

Balances efficiency with fairness, skills, and development.

WE EVALUATE WHAT MATTERS

- Idle hours avoided
- Task coverage and internal fill rate
- Training cost and time compared with external hiring
- Distribution of idle hours and training opportunities
- Safety-constraint violations

Prototype evaluation uses simulated workforce data.
Results will be measured, not assumed.

Automation may change the work. ShiftSure helps organizations make the next workforce decision more responsibly.
